

## ACTUATOR VALVE

### Product Datasheet

Thermoelectric actuators are used for the individual control of heating circuits on an underfloor heating manifold - this is especially important with multiple loops controlling different heating zones.

The valve contains a wax element, which on receipt of a signal from the thermostat (normally via a wiring control box), the valve will open, allowing the warm water to flow through the relevant pipework loop. The actuator valves are fixed onto the manifold return beam with a M30 nut (part of the valve).

#### Technical Data:

- Supply voltage: 230V
- Permanent power absorption: 1W
- Time of closing/opening: 3 min
- Nominal stroke: 4mm
- Ambient temperature: max 60°C
- Power cable: 2 x 0.75mm<sup>2</sup>, 0.8 m

#### Assembly:

- The actuator is to be installed on the thermoregulation valves on the "return" beam with the use of standard M30 x 1.5 connection
