

NEOSTAT – ELECTRIC UFH

Product Datasheet

The Heatmiser neoStat-e is our Electric Floor Heating Thermostat, offering you a smarter way to control your electric floor heating. When paired to a neoHub, (sold separately) you can control your electric floor heating from anywhere! The neoStat-e can be configured to work as a thermostat or as a timer.

The neoStat-e is supplied with a 3 meter remote floor sensor and is capable of switching up to 16A and communicates with the neoHub via wireless Mesh technology, greatly improving the network range when compared with traditional RF systems.
