

ISOLATING VALVES

1" Isolating valve with pipe fitting (sealing element O-ring) is designed for installation in water-based systems. The O-ring provides reliable sealing of the valve.

The valve is distinguished by a thick wall of the frame and excellent sealing of the valve stem. A gland in the stem allows easy removal of any leaks. This valve can be operated horizontally, vertically and diagonally. It is used for closing and opening the flow of hot and cold water, and central heating in houses and industrial buildings
