ACTUATOR VALVE

Thermoelectric actuators are used for individual control of heating circuits on an underfloor heating manifold - this is especially important with multiple loops controlling different heating zones.

The valve contains a wax element, which on receipt of a signal from the thermostat (normally via a wiring control box), the valve will open, allowing the warm water to flow through the relevant pipework loop. The actuator valves are fixed onto the manifold return beam with a M30 nut (part of the valve)

Product Codes:
HOR/ACV-230: 230V ACTUATOR
HOR/ACV-230/3M: 230V ACTUATOR WITH 3M CABLE
HOR/ACV-024: 24V ACTUATOR
HOR/ACV-024/3M: 24V ACTUATOR WITH 2M CABLE

5 YEAR GUARANTEE
